

Feedback group 29 task 25

by group 30

00:20: Display the text as one entity -> more convenient to read

03:00: The y-axis is maybe a bit short on the first two plots (nit-picking at its finest 😊)

04:00: When introducing the parameters and the code snippet, take a larger font size (and place it more in the middle of the slide)

07:30: Maybe try to enlarge the graph section, so that the axis labelling is better readable -> you focus your explanations on it, but it only takes a quarter of the screen

11:45: The arrows are really helpful here

12:05: Take the same size for all graphs -> looks more structured

General:

- Volume level differs between the speakers
- Maybe lower the background sound level a bit
- Maybe brighten the white font on the black background -> higher contrast increases readability
- Nice approach to explain the code implementations

All in all, you have created a really good explain video! You can already see this in the fact that we could only find minor points for improvement.
