

Feedback for group 30/task 12 by group 32

We appreciated a lot that you mentioned what your task had been in the beginning.

Your slides were overall nicely structured. We liked the examples you chose as they were relevant for us and good to follow. The explanation on slide 3 was especially great. The questionnaire you came up with was also way better.

However, we think it could be even more understandable if you would use more than the one colour blue on the slides with tables. On the first graphical model the category names seem odd, maybe rename them, and the probability on slide 6 is listed twice which seems unnecessary.

You used a lot of text on many slides which is great when you just have the slides to work with, but during a lecture it is hard to follow both the voice over and read the text. Maybe think about using more bullet points and putting the lengthy explanation in the comment section of the presentation.

On the slides with a lot of calculation it might be helpful to let one line appear after another. Make the presentation of content more successive, so it does not appear overwhelming.

All in all, you already did a great job. These are just some side remarks that could improve your slides even more.
